

## DEGA ALFA

Monocomponent transparent resin treatment.

**DESCRIPTION:** **Dega Alfa**, is a colourless monocomponent penetrating resin coating, which gives an effective protection against dust on old concrete floorings. Colourless, anti-dust, waterproof, relatively anti-acid, it prevents the concrete's crack and increases the resistance to the usury.

**EMPLOYMENTS:** floorings in stock warehouses, garages, production departments etc... where it's necessary to avoid the formation of dust.

**APPLICATION:** apply **Dega Alfa** on the previously cleaned and dried surface. Possible previous treatments, waxes or fat products, must be completely removed (we suggest to use our AP10 de-greasing product). The application consists in laying 2 hands of product by means of a roll, a brush or spray one after minimum 3 hours from the other at room temperature.

### TECHNICAL DATA:

Limit temperature of exercise	- 30° C + 70° C
Minimum application temperature	+ 10° C
First hardening at 20° C	3 h
Total hardening at 20° C	48 h
Specific weight	About 0,9 Kg/dmc
Colour	Transparent
Application	Roll, Brush, Spray
Made for each hand	100-150 gr/mq depending on the porosity of the surface
Storage time	About 12 months
Boxes	1 Kg - 2,5 Kg - 10 Kg
