

Gobbetto

An Italian company with international reach, Gobbetto has been producing patented resins for 65 years, the result of ongoing experimentation and technological innovation.

# About us

A journey in search of solutions for architecture and interiors, design and art aimed at creating customized resin floors, coatings and surfaces capable of conveying unique contents and expressive languages each time, thanks to the malleability of resin materials.

01

# Research & Development

## 02

A company that has made research the cornerstone of its industrial production, conducted internally at its headquarters in Trezzano sul Naviglio.

In Gobbetto's laboratories, experimentation transforms into innovation, leading to technologically advanced resins protected by patents.

**Photosensitive, elastic, removable, non-toxic, thermosetting, and magnetic resins.**

Cutting-edge equipment allows for the development and testing of resin proposals with special characteristics. Ideal for both indoor and outdoor applications, each further available in multiple variants.

# Gobbetto custom

Whether formally rigorous or with a strong and unexpected creativity, Gobbetto resin thrives on customization thanks to its flexibility. Highly personalized projects for the uniqueness of aesthetic outcome and materiality, color tone, and refined finishes.

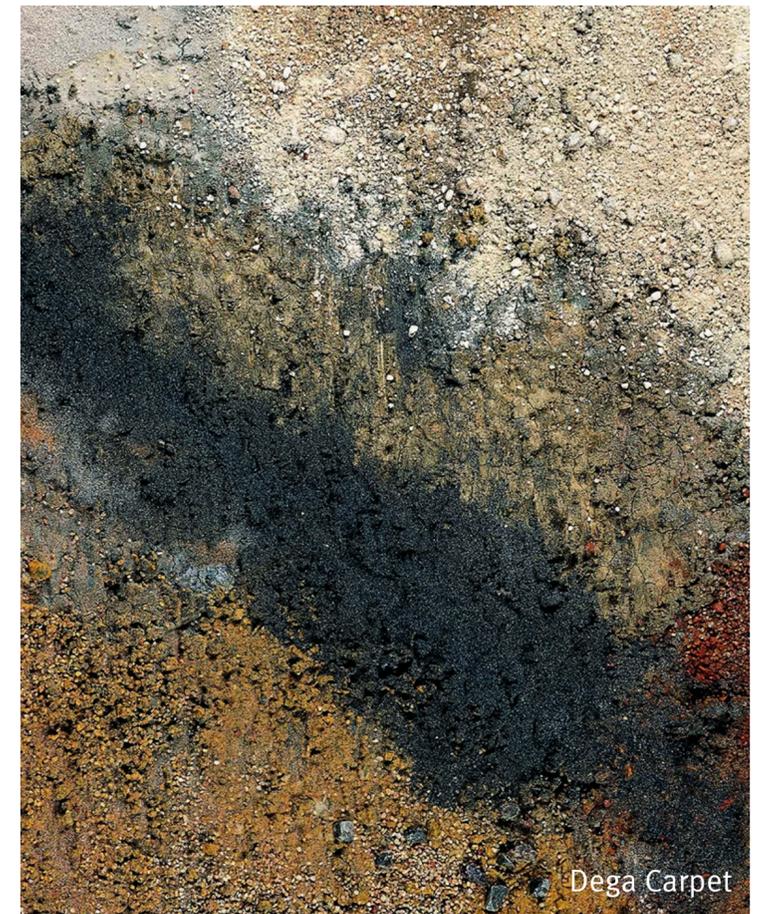

Different resins are suggested, paired, blended, and applied with the typically Italian craftsmanship and ingenuity.

# Products and Lines

Monosint, Dega Spatolato, Dega Art, Dega Rock, and Dega Carpet represent the evolution in the world of innovative surfaces. They are interpreters of contemporaneity, technically versatile, communicative, and aesthetic. These lines of Gobbetto resins offer variations designed for both interiors and exteriors.

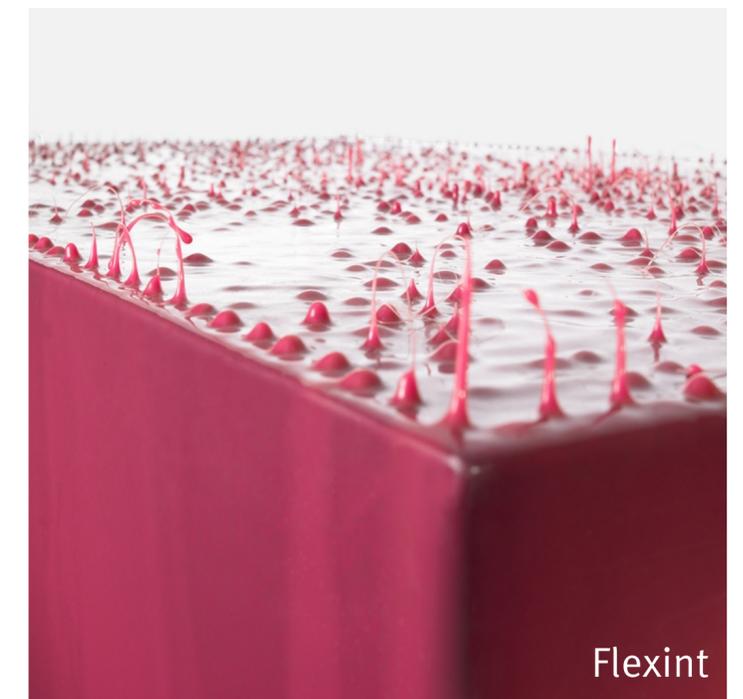

# 05

Gobetto's approach to the color palette is characterized by a balanced offering of natural classics and more vibrant color options. The resin enhances spaces and surfaces through color, transforming environments into either fluid and natural or vibrant and deep spaces. Last but not least, the materiality of the resin, with its ability to capture light and shadow in ever-changing ways, adds extraordinary character to every project.

# Innovative Materials

Constant experimentation leads to the development of flexible resins for interior, artistic, or communication applications. Magnetic resins like Dega Energy, a real asset for interior architecture, allow for the attachment of accessories and furniture components using specific magnets while preserving the integrity of surfaces and with conductive properties that enhance thermal efficiency when applied to floors.

Photosensitive resins, chameleon-like in color and form as Biolight and Biolux, elastic for covering various objects as Flexint, removable and reusable, non-toxic, and thermosetting as Street Spot. These materials are designed for advertising spots and creative forms of communication that revolve around innovative materials.

# Panels

A flexible expression of Gobetto's customization, the Floating Resin Panels are creative, artistic, ultra-light, and perfectly adaptable to any surface. They respond flexibly to all design needs, whether for residential or contract spaces. Custom-made in all available finishes of the Dega Spatolato and Dega Art lines, they can also be decorated with personalized prints.

# Area of application

A technical choice with creative implications, resin finds versatile applications from residential to contract settings, from design to art. Serving various roles, resin is suitable for defining floors, walls, and surfaces in residential and public spaces, as well as in industries and naval applications. It is also used to shape objects, designer furniture, and works of art, often providing fresh and innovative perspectives.

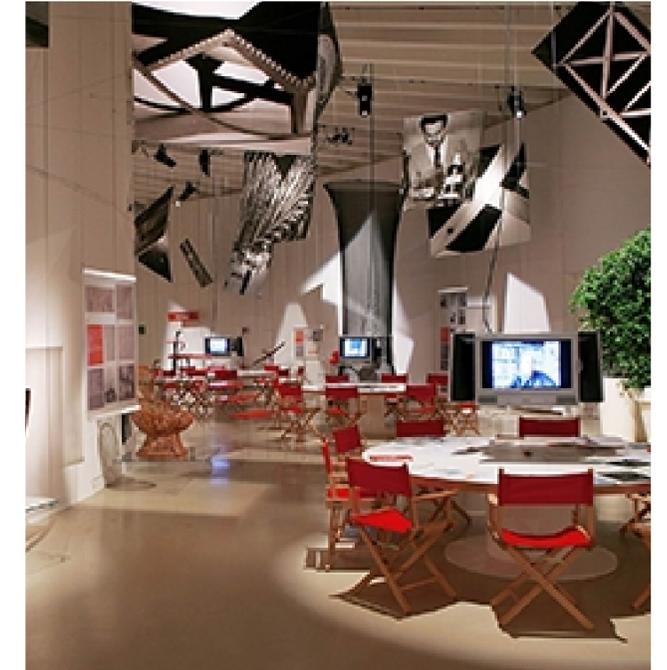

# Projects

Gobetto continues with consistency on its path of research and experimentation, expanding the endless applications of resin to propose new solutions for architecture and interiors.

**Their international projects, ranging from residential to contract, are characterized by the quality of *Made in Italy.***

Haworth Showroom, New York, 2020

Triennale Milan, 2006

Palacinema Locarno, 2018

Ami Sushi Restaurant, Vicenza, 2021

# Flagship

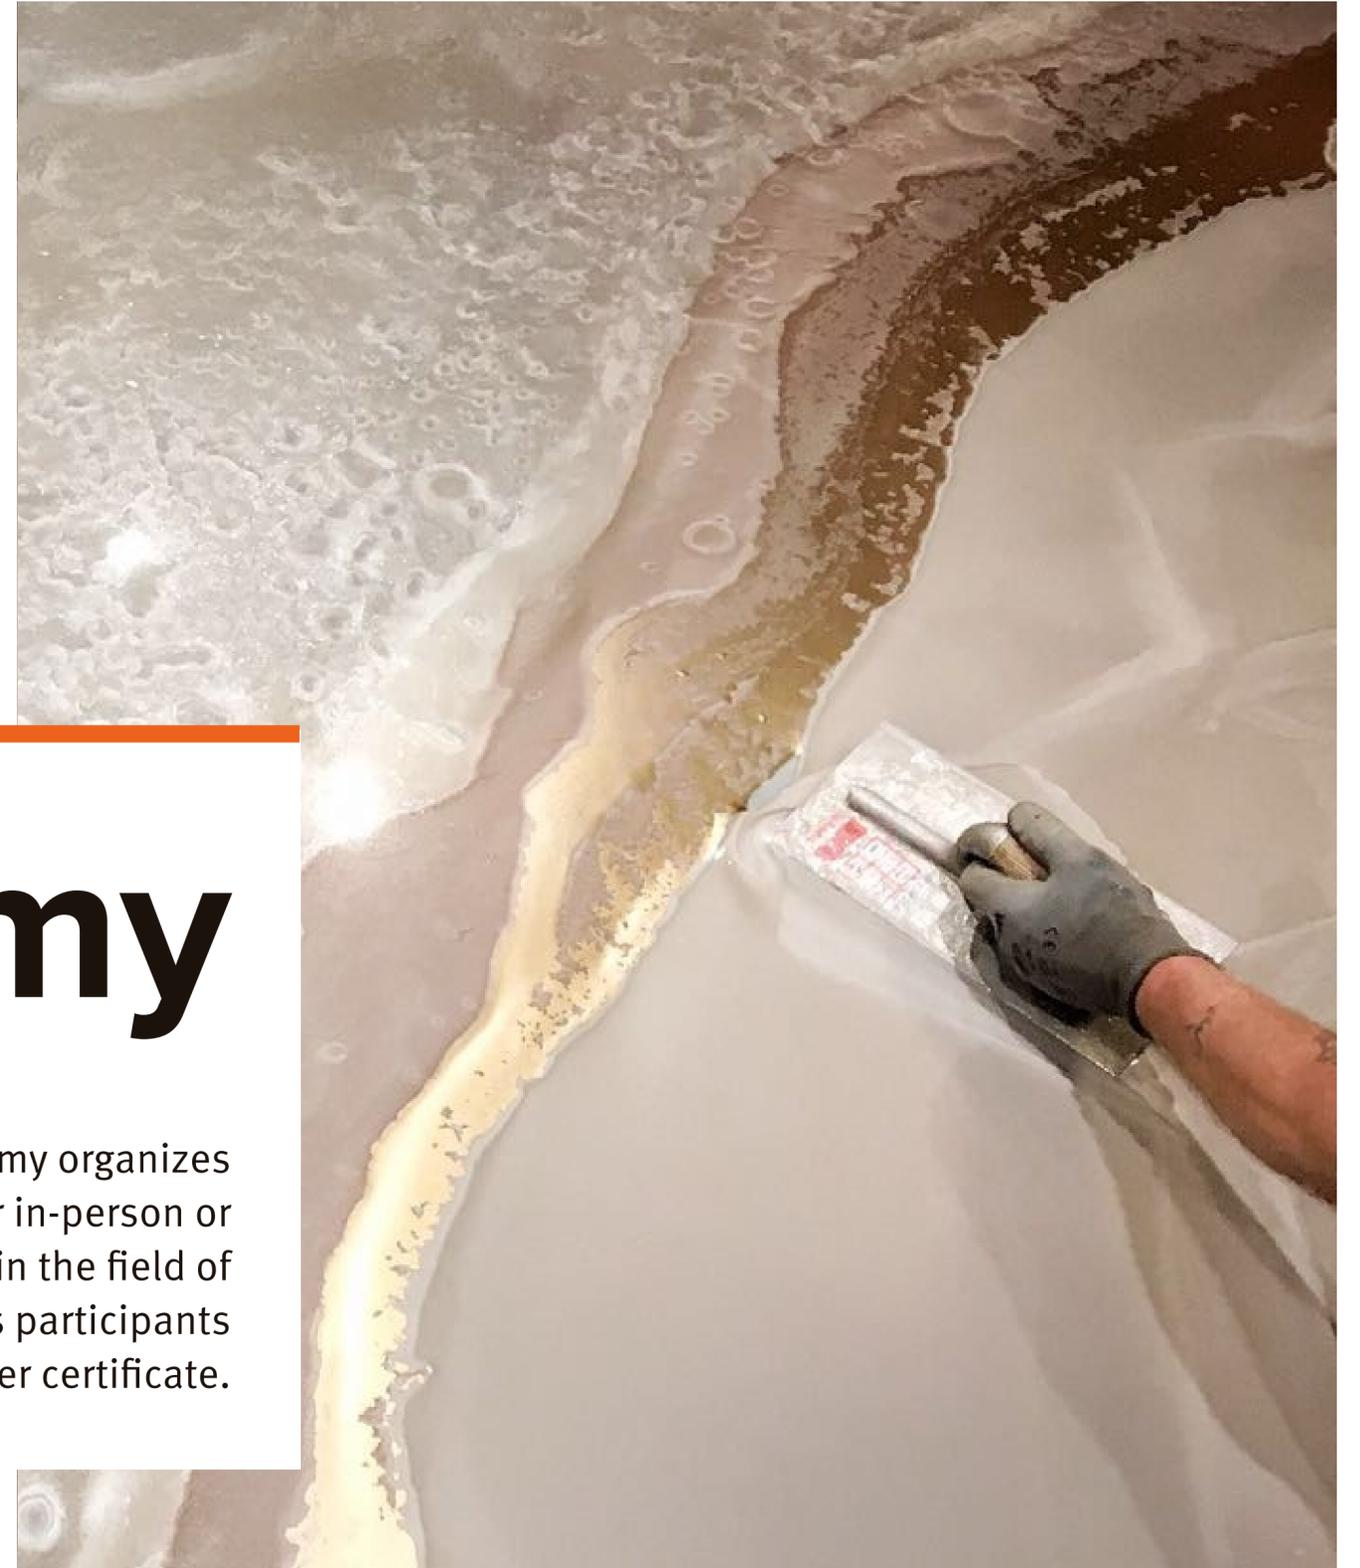

A meeting and exchange point for architects, designers, artists, and the public, the Gobbetto Flagship Store at Via Carroccio 16 is located in the historic center of Milan, the capital of design. The showroom communicates the wide range of Gobbetto resins and their endless application possibilities. Research, technology, and typological variety are expressed through ever-changing interpretations of the resin collection.

The Gobbetto Flagship Store is the complete embodiment of a contemporary concept of material, flexible and constantly evolving, in a showcase capable of offering custom-made solutions for professionals and individuals, with consultancy services.

12

# Academy

Founded twenty years ago, the Gobbetto Academy organizes training courses and technical updates, either in-person or remotely, catering to specific educational needs in the field of resin applications. The professional course allows participants to earn a recognized Gobbetto installer certificate.

# Patents

13

Since its foundation, Gobetto has protected its inventions with patents, ensuring the utility and originality of the products offered, which are the result of constant innovation and research.

It was in the late 1960s that resins were used for boat and aircraft construction. The idea then arose to extend the use of resin to the construction industry. Research and experimentation led to the development of Monosint, a patented monolithic product that quickly found significant application in the industrial sector for covering large flooring surfaces.

In the 1980s, Gobetto expanded its horizons from the industrial sector to the residential and contract sectors, giving birth to new products. Continuous experimentation led to the development of photosensitive resins that change color and shape, resins that are elastic for covering any object, removable and reusable, non-toxic, thermosetting.
